# Workaround when macOS does not recognize your DJ equipment

1. Connect your Mac with your DJ equipment using a USB cable. Turn on the power of the DJ equipment.
2. Open [**Finder**] and select [**Applications**] from [**Go**] on the menu bar.
3. Run [**Audio MIDI Setup**] in the [**Utilities**] folder.
4. Ensure that [**Audio MIDI Setup**] is shown on the menu bar. Then, select [**Show MIDI Window**] or [**Show MIDI Studio**] from [**Window**] drop-down menu.
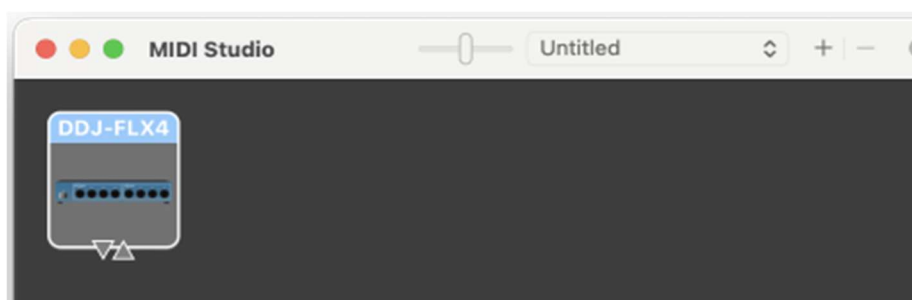

An example of macOS Sonoma

5. [**MIDI Studio**] window opens up.
   ➢ [**USB MIDI Device**] may appear, instead of the connected DJ equipment.
6. Switch [**Default**] to [**New Configuration**] from [**Configuration**] drop-down menu.
